## The Student Centric Study Management System

## The Data Acquisition Team

Anukriti Srivastava

*Resource Manager and Team Leader*

Tejas Patil

*Assistant Resource Manager*

Georgetta Wilson & Manishankar Veermalla

*Junior Assistant Manager*

*Version 1.2 beta*

## Team Details

**Anukriti Srivastava** is the **Student of MBABA, Sem-2 from Sandip University** and for this project she is **Resource Manager and Team Leader**, responsible for handling the resources and collecting appropriate data for creating the study material and guiding the team to create the study material for their respective subjects with her help in expertise for ai tools ( ChatGPT and Gemini).Also handling the subjects PBA204(Production and Operations Management) and PBA205(Digital Transformation).

Also, **Tejas Patil** is also the **Student of MBABA, Sem-2 from Sandip University** and he is the **Assistant Manager** for this project, responsible for helping Anukriti with resource and data collection. Also handling the subjects PBA206(Legal aspects of business) and PBA211(Data analysis using python).

However, **Georgetta Wilson & Manishankar Veermalla** are also the **Student of MBABA, Sem-2 from Sandip University** and are the **Junior Assistant Manager** for this project, responsible for handling the subjects PBA207(Data visualization and storytelling), PBA213(Business communication skills) and - PBA208(Business research methods) and PBA212(Data analysis using Power Bi) respectively.

## Acknowledgement

The Special Thanks to the our teachers Dr. Zahir Shaikh and Dr. Samadhan Bundhe from Sandip University for their precious guidance and support. We are glad to have such guide or mentor who help us to review and evaluate the process continuously to avoid any neglection.

Under the Guidance of Dr. Zahir Sir, we have applied the various concepts of Business Research Methods, while under the Guidance of Dr. Samadhan Bundhe, we have applied the concept of Data Management and Warehousing along with SQL handling.

## Resource Requirements

The very basic requirements are syllabus and book reference for all individual subjects. The resources are needed to open a way to create study material (study notes, case studies, projects, question bank and cheat sheets) which can be done using the syllabus and book reference given.

The resources like syllabus and book reference are just not enough for creating study material on their own so the idea of creating the study material from AI gave a helping hand and for simple and easy understanding we prioritized the AI tools like **ChatGPT** and **Gemini**.

## Limitations & Solutions

While creating the study material from ChatGPT and Gemini many problems started to pop up like these ai tools have a problem of contextual building and hallucination which gives a lot of different answers every time and is not following the particular word counts for marks segment given which results in scattered answers giving difficulty in understanding and choosing the best answers.

Also the formatting was a big deal having mixed formatting and requiring manual fixes every time mainly for numerical terms it is very difficult to save the files in proper numerical formatting. It lacked platform cross functionality also.

The limitations were a hurdle for creating the study material so after series of discussions with the Coordinator (Tanu Chaudhary) and Quality Manager (Kaif Shah) to get rid of the above problems, the idea of tailoring a custom AI(ChatGPT and Gemini) came on the table where we ended up using the **Custom ChatGPT** over **Gemini's Gem** because custom ChatGPT was more clear and simple to the understanding of our class.

Starting with using the custom ChatGPT we could customize it's functions according to class needs making it more easier for understanding and managing it with the study material which was needed (required number of words, focused on the given topic, point to point clear word explanation and more) for helping the students with their CIAs and the end semester exams.

And as for the formatting issue google extension came to rescue by providing an extension which could convert the AI generated answers into HTML files securing it's formatting and time of copy-paste system which wasted a lot of time.

The data stored in HTLM files helped us to secure the formatting and quality of the study material generated through the use of custom ChatGPT. Extension name as named "**ChatGPT chat to pdf, docx, html, markdown, json and etc. Free Forever**". With the help of all the teams the limitations were removed for a steady flow of creation of study materials.

# Custom ChatGPT Protocol

As discussed in the solution part of the resource requirements the agenda of using a custom ChatGPT came into place with the help and efforts of all the teams and we made the following protocols according to the needs required for making our study materials:

## 1. *NoteSmith* –

This custom ChatGPT was specially tailored for providing us with our study notes of each unit of every subject in the proper format with limited word count and word to word explanation given through the book reference.

For this purpose we only needed to upload the syllabus and book pdf for reference on the NoteSmith customized ChatGPT and our notes would get ready in small parts to avoid hallucination and incorrect answers and to secure proper formatting of the notes.

In the subjects where numerical knowledge is required this custom ChatGPT also provides proper formulas and numerical based practise questions for deep understanding of that particular subject.

## 2. *Syllabrix* –

This custom ChatGPT was specially made for providing us with the question bank needed which meant questions of both 2 marks and 15 marks (as per the exam pattern). It provided 10 questions each of 2 marks and 15 marks per unit with specified word count for each mark questions respectively.

For this purpose also we just needed to upload the syllabus and book reference of that particular subject on the Syllabrix customized ChatGPT.

## 3. *CaseOrbit* –

This custom ChatGPT was specially tailored for providing us with the case studies of each unit . These case studies were strictly based on industry and real world company's studies providing us with enhanced and top notch case studies.

It provided with 3 real life company's studies for each particular unit for all the respective subjects. For this purpose also we just needed to upload our syllabus and book pdf reference in the CaseOrbit customized ChatGPT and it would instantly create case studies on each important topics from every unit.

## [UPCOMING EVENTS]

We are planning to launch more of customized ChatGPTs each for projects , flashcards and cheat sheets to improve our level of learning and understanding more about each subjects. The teaming is working hard to add as many items as possible to get a good hold of every subject's knowledge.

## Subject & Resource Allocation

A total of 8 subjects is difficult to be managed by a single person so the subjects were allotted in the guidance and help of Anukriti Srivastava (Resource Manager and Team Leader) and were distributed as per the members respective expertise in the following manner:

| Student Name          | Subject Code | Subject Name                         |
|-----------------------|--------------|--------------------------------------|
| Tejas Patil           | PBA206       | Legal aspects of business            |
|                       | PBA211       | Data analysis using python           |
| Manishankar Veermalla | PBA208       | Business research methods            |
|                       | PBA212       | Data analysis using Power Bi         |
| Georgetta Wilson      | PBA207       | Data visualization and story telling |
|                       | PBA213       | Business communication skills        |
| Anukriti Srivastava   | PBA204       | Production and Operations Management |
|                       | PBA205       | Digital Transformation               |

After the allocation of the subjects was completed, Anukriti Srivastava (Resource Manager and Team Leader) guided every member on how to start creating the study material of their respective subjects with the help of the custom ChatGPT made and even helped them for any further doubts while using the customized ChatGPT.

The link of all the individual custom ChatGPT(NoteSmith, Syllabrix and CaseOrbit) was shared among all the members insuring a proper use of the resources and less wastage of time. With this all members easily handled their subject's study material.

## Data Hand Over

After the members completed their respective study material they handed them to Anukriti Srivastava (Resource Manager and Team Leader) in the form of HTML files and after cross checking all the subject data files with Kaif Shah(Quality Manager) for assessing the quality and to maintain that quality to avoid future inconvenience.

All the HTML files were then transferred to the technical team(Harish Chavan and Kaustubh Nandurkar) for the further processes.
